

## FIXation Balansa Clover

Latham®

Fixation  
Balansa Clover

### POSITIONING & MANAGEMENT

Balansa Clover is a cool-season annual legume highly adapted to a variety of soil conditions. It's quick to germinate and provides a variety of benefits:

- Revives soil by unlocking nutrients from deeper depths and improving soil health
  - Can fix more than 100 lbs N/acre
  - Deep taproot creates channels for air, water and subsequent roots
  - Survives short-term flooding and challenging soils
  - Provides abundant forage - up to 5,250 pounds of dry matter/acre in a single cutting
  - Crude protein from 22% to 28% and relative feed values as high as 277
  - Excellent option for interseeding in established alfalfa fields or mixed with cereal rye
- 

### PLANTING RECOMMENDATIONS

- **Timing:** Up to July 1 through Sept. 30 based on zone
  - **Rate:** 3-5 lbs/a in a mix, 5-8 lbs/a in a monoculture
  - **Depth:** Drill 1/8" to 1/4" deep or broadcast
  - **Soils:** Adaptable to a variety of soils; will tolerate moderate salinity and pH from 4.5 to 8
-
