

481 HVXRR

Forage Quality HarvXtra®

HarvXtra® Alfalfa

WITH ROUNDUP READY™ TECHNOLOGY

POSITIONING & MANAGEMENT

481 HVXRR alfalfa gives farmers the tools to manage the yield-versus-quality trade off by allowing for a wider harvest window, while maintaining peak quality. This alfalfa is fully equipped with Roundup Ready® technology for excellence in weed control. How HarvXtra® works: Typically as alfalfa plants mature, Neutral Detergent Fiber Digestibility goes down, which means cows can't eat as much. Plants with the HarvXtra trait demonstrated a 10-15% increase in NDFD and Relative Forage Quality when compared to related lines without the HarvXtra trait, meaning cows will be able to eat more and produce more. Plus, this new low-lignin alfalfa maintained standability similar to conventional alfalfa.

HIGHLIGHTS

- Wider harvest windows for increased flexibility to manage quality
- 12-15% less lignin and 12-15% higher neutral detergent fiber digestibility for improved digestion and increased output per cow
- Stacked with Roundup Ready® technology for unmatched weed control and crop safety

OVERALL CHARACTERISTICS

Fall Dormancy	4	DRI	35/35
Winter Hardiness	1.9	Phytophthora Root Rot	Highly Recommended
Cuttings per Season	3 - 4	Aphanomyces Root Rot Race 1	Highly Recommended
Forage Quality	Excellent	Aphanomyces Root Rot Race 2	Not Rated
Regrowth After Cutting	Fast	Anthracnose	Highly Recommended
Leaf Style	Multi-foliolate	Bacterial Wilt	Highly Recommended
Root Type	Tap	Verticillium Wilt	Highly Recommended
Stem Type	Fine- Medium	Fusarium Wilt	Highly Recommended
Wheel Traffic	Excellent	Lepto Leaf Spot	Not Rated
Dry Soils	Very Good	Stem Nematode	Not Rated
Heavy Wet Soils	Excellent	North Root-Knot Nematode	Not Rated
		Southern Root-Knot Nematode	Not Rated
