

ALFALFA WITH ROUNDUP READY® TECHNOLOGY

POSITIONING & MANAGEMENT

Many factors affect production of high quality alfalfa including the plant itself and the weed control in the field. This Traffic Tested® alfalfa produces large and deep set crowns with high root and crown carbohydrate reserves for regrowth and winter survival. When combined with the Genuity® Roundup Ready® system, you also can have unsurpassed weed control for higher quality and higher yielding forage. Managing harvests and cutting schedules to lower dry matter losses also increases quality.

24 Days After Emergence

GroZone

Preinoculated
Uncoated

TOP QUALITIES

- Excellent forage quality for optimal performance
- Perfect disease resistance score of 35/35 DRI
- Very fast recovery for frequent harvest schedules

PACKAGED WITH GROZONE® SEED COATING

Each bag of LH 457TQ RR comes precoated with GroZone®. This unique coating is proven to deliver 100% more live rhizobium per seed than preinoculated uncoated seed. This promotes:

- Better Emergence (up to 25% better emergence when growth is delayed due to low moisture)
- Better nodulation
- Better application

OVERALL CHARACTERISTICS

Fall Dormancy	4.2	Disease Resistance Index	35/35
Winter Hardiness	1.8	Phytophthora Root Rot	High Resistance
Cuttings per Season	4-5	Aphanomyces Root Rot Race 1	High Resistance
Forage Quality	Excellent	Aphanomyces Root Rot Race 2	Medium Resistance
Regrowth After Cutting	Very Fast	Anthracnose	High Resistance
Leaf Style	Multi-foliolate	Bacterial Wilt	High Resistance
Root Type	Tap	Verticillium Wilt	High Resistance
Stem Type	Fine	Fusarium Wilt	High Resistance
Wheel Traffic	Excellent	Lepto Leaf Spot	N/A
Dry Soils	Very Good	Stem Nematode	N/A
Heavy Wet Soils	Very Good	North Root-Knot Nematode	N/A
		Southern Root-Knot Nematode	N/A

Rating Scale: 1 = Excellent, 5 = Poor, N/A = Not Applicable
